Art Unit: 3634

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

The applicant's information disclosure statements dated 3/20/2006 and 10/17/2008 have been considered and a copy has been placed in the file.

The status of the claims is as follows:

Claims 1-9 have been cancelled; and

Claims 10-25 are herein addressed below.

Claims 16 and 24 are objected to because it appears that the opening widens in the horizontal direction and not the vertical direction. Clarification is requested.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 18, 21-23, and 25 are rejected under 35 U.S.C. 102(b) as being anticipated by Great Britain patent to Aihara et al. Great Britain patent to Aihara et al. disclose a guiding system (16) for a sliding door (10) of a motor vehicle comprising a runner rail (18) having a first second and a curved section (best seen in Figure 2) with the rail having a V-shaped section and a trough along a bottom section wherein the rail

Art Unit: 3634

substantially covers the guiding system, a roller assembly having three aligned rollers (24, and 26) guided along the track (18), and a spring element (36) rotatably engaging the rollers (24 and 26) which engage the track.

Claims 10-17 are allowable.

Claims 19, 20, and 24 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Several patents have been cited which disclose a roller arrangement similar to that of the applicant's invention.
